PROFESSIONAL SUMMARY

Python and Django developer with experience building full-stack web applications using Django, SQLite, HTML, CSS, and JavaScript. Developed two end-to-end web applications including a URL shortener and a student result management system, covering database design, Django ORM, Git-based version control, and production deployment on Render.

TECHNICAL SKILLS

- Languages: Python, JavaScript (Fundamentals), HTML5, CSS3, SQL
- Framework: Django
- Databases: SQLite, PostgreSQL (fundamentals)
- Tools: Git, GitHub, VS Code, Render, WhiteNoise, python-dotenv
- Concepts: Django ORM, CRUD operations, MVT architecture, URL routing, Django templates & forms, Django Admin, responsive web design, static file management, environment variables (.env), secret key management

PROJECTS

SnapLink — URL Shortener | Python, Django, SQLite, HTML5, CSS3, Git, GitHub

- Built a URL shortening web application using Django that generates custom short links and redirects users to their original URLs via a database-backed lookup.
- Designed a URL redirection workflow that retrieves the destination URL from SQLite using Django ORM before issuing an HTTP redirect.
- Added custom alias support, allowing users to create memorable short links instead of random IDs.
- Implemented server-side validation to check for duplicate aliases before saving a new record.
- Designed a responsive landing page with a recent-links section, gradient UI, and input validation feedback.
- Explored PostgreSQL as a production alternative to SQLite — configured a Render PostgreSQL instance and psycopg driver to understand persistent cloud storage, then reverted to SQLite for this demo project.
- Managed source code with Git and GitHub, including resolving merge conflicts.

College Result Management System | Python, Django, SQLite, HTML5, CSS3, JavaScript, Render, WhiteNoise

- Built a Django-based student result portal that retrieves examination records from a relational database using Hall Ticket Number lookup.
- Designed a database schema with 5 student-related fields, including Hall Ticket Number, subject marks, total marks, and result status.
- Implemented Django views and URL routing to handle result search, display, and error (invalid Hall Ticket Number) pages.
- Configured the Django Admin Panel for adding, updating, and deleting student records.
- Built 5 responsive templates (index, result, error, table, marks) using Django Template Language.
- Configured the application for production by managing static files with WhiteNoise, environment variables via .env, and deployment settings, then hosted it on Render.
- Managed source code with Git and GitHub throughout development.

EDUCATION

BSc Physical Sciences (Mathematics, Statistics, Computer Science)

Final Year — Expected 2027

BJR Government Degree College, Hyderabad

Intermediate (MPC), Board of Intermediate Education, Telangana

2023 — 70.8%

Sai Chaitanya Jr. College, Hyderabad

Secondary School Certificate (SSC), Board of Secondary Education, Telangana

2021 — 100%

Hyderabad Sainik School, Hyderabad

CERTIFICATION

- Python Web Development Course — Siasat
